The
Stone
Project

From the landscape of Tuscany

In the outskirts of the worldwide renowned Val D'Orcia, Silvano and Franca (CEI and PO) started working on terracotta over 40 years ago.

Since then, they have never lost the love for this unique and eclectic material.

From the risk of interrupting the production after the closure of the local furnace and subsequently moving the whole family somewhere else, they saw the opportunity to follow their dreams and create UNIQUENESS.

Thanks to ancient knowledge and deep passion for the material, the typical entrepreneurship of the Tuscan people and their creative vision they made all the right investments in spaces, people and equipment to take CEIPO to the most advanced design level.

In times where what's new turns immediately old, the old shows its contemporaneity: SUNSCREENS have been largely adopted in the past to partitionate spaces, guarantee privacy and provide proper airflow in the buildings. Several examples of this elements can be found all over the region in Medieval churches, barns, castels, monasteries etc...

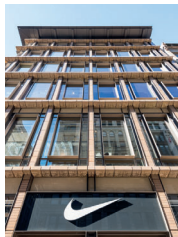

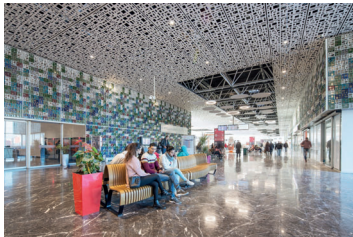

The newest technologies available today, the most up to date equipment, the expertise our craftsmen gained across decades, allows CEIPO to maximize all the qualities of its products.

The ductility of the raw materials and the refined design inspired by the interplay between light and shadow, make this a perfect architectural element in modern design, from interiors to landscaping.

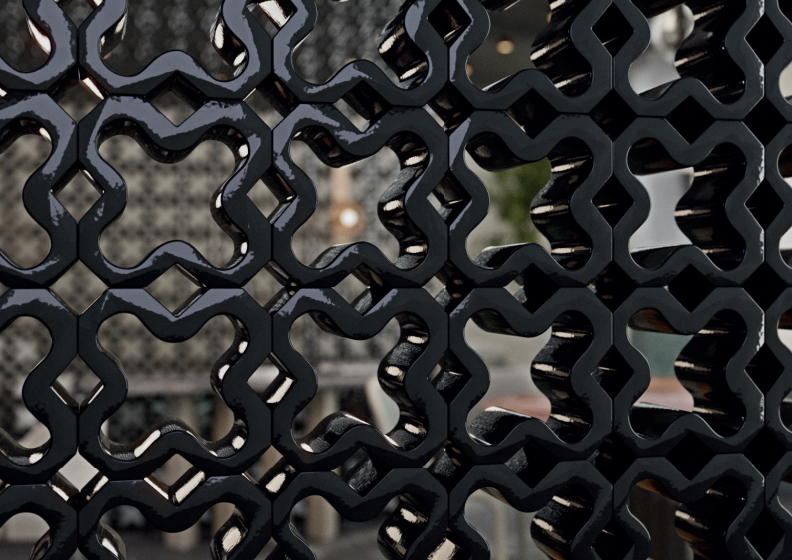

This is why CEIPO products have been used in many type of projects across the world, from desert areas to freezing regions, from government buildings to private residences, both using the standard programs or challenging the Company to create custom shapes, like in the new Nike Store in NYC (see the next pages) or in the G.E.L (Green Energy Lab) in China, the first GOLD LEED Building in the PRC. .
